

Connection Center Webhooks Inbound

PRODUCT DATA SHEET

COOKDOWN
Let the data flow.

Integrate SCOM with anything, anywhere...
Make SCOM your central monitoring resource, raise SCOM alerts from your ITSM, DevOps, comms and automation tools.

Why integrate into SCOM?

95% of SCOM users have an average of 3 or more monitoring tools* resulting in a fragmented and inconsistent experience...

It is likely the tools you have picked are best in class, but it means you have to look in different consoles to get a true picture of your monitoring landscape resulting in a higher chance of things falling through the cracks.

SCOM's health model and object hierarchy make it the perfect place to center your monitoring universe!

Never miss critical monitoring insights again

With multiple monitoring tools comes multiple ways to consume alerts; with one tool using Slack messaging, and another using dashboards, increasing the risk that critical monitoring and performance data is missed.

Connection Center delivers your data in a fully integrated, uniform format ensuring consistency across all your tools. No more incorrect assumptions and variable terminology, so your team never miss a critical monitoring insight again!

Isolated

Time wasted checking multiple tools

- Increased downtime
- Missed SLAs
- Email notifications overlooked
- Duplication of tasks due to disjointed data
- Alerts remain unresolved
- Critical monitoring insights missed

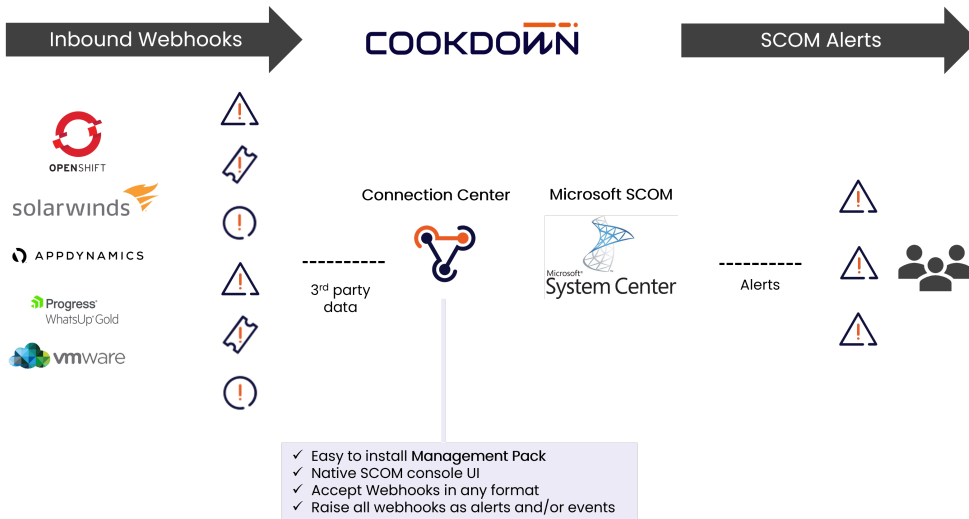

Integrated

Uniformity across your IT estate

- Business continuity due to effective monitoring
- Improved SLAs as root cause is more visible
- Alerts correctly routed & escalated to correct team
- Proactive monitoring & performance management

How it works

Make SCOM your single source of truth

Connection Center is your one-stop-shop for SCOM connectivity. Using code-free, out-of-the-box support to integrate all your enterprise tools. Make SCOM your monitoring hub; Connection Center combines ease-of-use, comprehensive integration and powerful customization options.

Pricing

We are committed to delivering affordable, hassle-free enterprise software that lives up to its promise.

From \$7,000/year

Licensed by the number of nodes in your SCOM management group. Nodes include SCOM agents, Linux servers, and network devices.

Including Support

All licenses include email support with a 72-hour SLA and free upgrades.

Key Features

Out of the box, native integration

No need to write a single line of code, they can simply connect SCOM to your other IT tools in just a few clicks.

Raise alerts from any IT tool

Use Webhooks to connect your IT applications to SCOM to raise alerts.

Rule-based alert handling

All messages received are raised as rule-based alerts by default, removing complexity.

Raise Events in SCOM

Put Connection Center into "Advanced Mode" and raise only Events in SCOM. Use SCOMs native functionality to build your own monitoring on top of events received: monitors, rules, health state & richer monitoring.

Customize alerts

Shape alerts raised using the intuitive "Liquid" format to customize what is raised in SCOM.
